01

Startup Snapshot — 10-Bullet Summary

- **Idea:** AI platform that audits resumes, identifies skill gaps, optimises LinkedIn profiles, and creates personalised career roadmaps for Indian CS/tech students.
- **Customer:** CS/IT/DS students aged 18–25 at Tier 2–3 Indian colleges, fresh graduates with 0–2 years experience, actively job-hunting.
- **MVP:** Resume upload → instant AI score (0–100) + top-3 fixes + ATS keyword gap vs a pasted job description.
- **Value Proposition:** 'Get hired faster — know exactly why you're being rejected and what to fix, in 60 seconds, for less than a meal.'
- **Pricing:** Free (1 audit/mo) → Rs.99/mo Starter → Rs.299/mo Pro → Rs.1,999/yr Annual → Rs.50K–2L/yr B2B College.
- **Revenue Assumption:** 5% free-to-paid conversion; 100K MAU in Year 2 → Rs.1.5–2Cr ARR. B2B college contracts accelerate this.
- **GTM Assumption:** Organic LinkedIn content + college WhatsApp groups drive initial users; TPO partnerships unlock B2B channel.
- **Competitive Moat:** India-native AI context + end-to-end career journey + student data flywheel (no competitor has all three).
- **Biggest Risk:** Competition from LinkedIn/Naukri/Unstop shipping a feature clone; and India's notoriously low freemium-to-paid conversion rate.
- **Verdict:** Strong problem-founder fit, credible market, zero validation. The idea is fundable IF the 30-day sprint confirms demand and willingness to pay.

Key Inputs Extracted from MVP Blueprint

Dimension	Extracted Value
Customer	CS/IT students 18-25, Tier 1-3 India, 0-2 yrs exp
MVP	Resume audit + ATS gap + skill gap identifier + dashboard
Value Prop	Instant, personalised, affordable AI career coach
Pricing	Free / Rs.99 / Rs.299 / Rs.1,999yr / B2B Rs.50K-2L
Revenue Assumption	5% conversion, 100K MAU Y2, Rs.1.5-2Cr ARR
GTM Assumption	LinkedIn + WhatsApp organic; college TPO B2B

02

Business Reality Check

Question	Honest Answer	Risk Level
Who pays?	Students reluctantly pay when emotionally triggered (placement panic). Colleges pay if platform drives placement outcomes. Recruiters pay for ranked talent access.	Medium — B2B path de-risks
Why do they pay?	Fear of rejection + career urgency. Job outcome is high-stakes. Rs.99-299 feels cheap vs Rs.5K+ coaching. Placement season spikes willingness.	Low — pain is real
How will they discover it?	LinkedIn organic content, college WhatsApp groups, referral from a hired peer, TPO recommendation. All are low-cost, slow-burn channels.	High — CAC must stay near Rs.0
Biggest growth risk?	LinkedIn/Naukri/Unstop ships a competing feature. Seasonal demand (placement cycles) creates revenue spikes and droughts.	High
Biggest monetisation risk?	India freemium-to-paid conversion is historically 2-4%. Students graduate and churn. No employer-side revenue to subsidise student pricing.	High — solve with B2B
Weakest assumptions?	(1) 5% conversion rate — unproven for India student SaaS. (2) Colleges will pay for licenses — needs 3+ LOIs. (3) Organic GTM scales — possible but slow.	Critical to validate

03

Executive Summary

The Opportunity: India graduates 1.5M+ engineers annually. 60%+ struggle to convert skills into interviews. No single AI-native platform exists that combines resume intelligence, JD matching, skill gap analysis, and personalised roadmaps at an affordable price point for this market. This is a real, large, and underserved problem.

The Business: A freemium SaaS with a B2C student tier and a B2B college/recruiter tier. B2C generates volume; B2B generates margin and distribution. The model is capital-efficient and defensible if India-native data advantages compound over time.

The Risk: Zero validation exists today. All revenue assumptions are theoretical. The critical question is not whether the problem exists — it does — but whether students will pay consistently and whether the founder can build a distribution moat before a well-funded competitor does.

04

Business Model Canvas

Block	Details
Key Partners	OpenAI/Anthropic (AI) Naukri/LinkedIn (job data) College TPOs (distribution) Payment: Razorpay
Key Activities	AI model prompt engineering Resume parsing & scoring JD keyword extraction User onboarding & retention
Value Propositions	Instant AI resume score ATS gap analysis vs JD Personalised skill roadmap Affordable vs Rs.5K+ coaching
Customer Relationships	Self-serve SaaS Weekly email digest Placement-season nudges Community (Discord/WhatsApp)
Customer Segments	CS students 18-25 Fresh grads 0-2 yrs Tier 2-3 India colleges B2B: TPOs & Recruiters
Key Resources	AI/ML engineering talent Career domain knowledge Student data corpus Founder network in colleges
Channels	LinkedIn organic content College WhatsApp groups TPO direct outreach Referral / word of mouth

Cost Structure	AI API costs (variable) Hosting & infra Founder salary (deferred) Marketing (organic first)
Revenue Streams	B2C: Rs.99-299/mo SaaS B2C: Rs.1,999/yr annual B2B: College license Rs.50K-2L Future: Recruiter access fee

05

Revenue & Pricing Strategy

Tier	Price	Features	Target Conv.	Revenue Role
Free	Rs.0	1 resume audit/mo, basic score	100% signups	Acquisition & habit
Starter	Rs.99/mo	5 audits, JD match, skill gap	3% of free users	Friction-free entry
Pro	Rs.299/mo	Unlimited, roadmap, LinkedIn, history	2% of free users	Core revenue tier
Annual Pro	Rs.1,999/yr	All Pro at 44% discount	30% of Pro users	LTV & churn defence
B2B College	Rs.50K-2L/yr	Batch analytics, TPO dashboard, API	10 colleges Y1	Margin & distribution

Year 2 Revenue Model (Conservative)

Scenario	MAU	Paid Users	ARPU/mo	B2B ARR	Total ARR
Bear	30,000	1,500 (5%)	Rs.180	Rs.20L	Rs.52L
Base	100,000	5,000 (5%)	Rs.200	Rs.75L	Rs.1.95Cr
Bull	250,000	15,000 (6%)	Rs.220	Rs.2Cr	Rs.5.96Cr

06

Go-To-Market Strategy

Phase	Horizon	Channel	Actions	Success Signal
Phase 0 Seed	Day 1-30	LinkedIn + WhatsApp	Post resume tips daily. Share free audit offer in 10 college groups.	200+ waitlist, 5+ paying
Phase 1 Grow	Month 2-6	Referral + TPO outreach	'I got hired' stories. DM 50 TPOs. Pilot 2 colleges free.	1K MAU, 2 B2B pilots
Phase 2 Scale	Month 6-18	SEO + YouTube + B2B	Long-form content on resume mistakes. 10 college licenses. Recruiter beta.	10K MAU, Rs.20L ARR
Phase 3 Expand	Month 18-36	Pan-India + SEA	Tamil Nadu, Maharashtra deep-dive. Nigeria/Indonesia pilot.	100K MAU, Rs.2Cr ARR

07

Customer Acquisition & First 100 Users

First 100 Users — Week-by-Week Plan

Week	Target	Channel	Actions
Week 1	0 → 20	Personal network	DM 30 CS batchmates. Post on LinkedIn: 'I'm building X — want a free resume audit?'
Week 2	20 → 50	WhatsApp + Landing page	Share waitlist in 10 college placement groups. LinkedIn post on 'Why your resume fails ATS'.
Week 3	50 → 75	Concierge delivery	Deliver manual AI audits to first 50 signups. Ask each one to share with 2 friends.
Week 4	75 → 100	PoC launch + referral	Launch minimal web app. Activate referral: 'Get 1 month free for every friend who signs up'.

Unit Economics (Target State — Year 2)

Metric	Target Value	Comment
CAC (B2C organic)	< Rs.200	Social/referral only; paid ads only after PMF
LTV (B2C Pro)	Rs.2,400-3,600	8-12 month avg subscription before graduation churn
LTV:CAC ratio	> 10:1	Viable only if CAC stays near zero via organic
Gross Margin (B2C)	65-75%	AI API cost is main COGS; optimise with caching
Payback Period	< 1 month	Rs.99 starter plan covers CAC immediately if organic

08

Competitive Position & Moat

Competitor	Strength	Weakness	Our Edge
Resumeworded	Strong ATS engine, global brand	No India context, no roadmap, USD pricing	India-native AI + end-to-end journey
LinkedIn Premium	Network scale, data richness	Rs.2,500+/mo, not student-focused	10x cheaper, placement-ready UX
Naukri/Shine	India job data, brand trust	Zero AI guidance, no skill roadmap	AI advisor layer on top of job data
Hiration	India resume templates	Resume-only, limited AI	Full career journey, not just resume
ChatGPT (DIY)	Free, powerful, flexible	No career memory, needs prompt skills	Purpose-built, no prompt expertise needed

Moat Building Strategy

- **Data Flywheel:** Every resume uploaded improves AI scoring accuracy. 100K resumes = a dataset no competitor can replicate.
- **India-Native Context:** Train on Indian job descriptions, CGPA norms, campus placement formats — irrelevant to global tools.
- **B2B Lock-in:** TPO dashboards and college analytics create switching costs. Colleges renew; students graduate.
- **Founder = User:** Deep empathy drives product decisions that resonate in ways outsider-built products miss.

09

Reverse SWOT Analysis

Standard SWOT identifies factors. Reverse SWOT asks: how do we neutralise threats and convert weaknesses into strengths?

Category	Factor	Reverse Action
Strength	Founder is the target user	Use personal story as marketing. Authenticity = trust = organic growth.
Strength	Technical AI capability	Build India-specific AI fine-tuning others can't replicate quickly.
Weakness	No B2B / GTM experience	Recruit an advisor/co-founder with college BD experience in Month 1.
Weakness	Zero validation	Treat as an advantage: nothing to unlearn. Run 30-day sprint ruthlessly.
Opportunity	1.5M+ annual engineering grads	Focus on top 100 colleges first. Word-of-mouth inside college is dense.
Opportunity	AI cost falling rapidly	Lock in Rs.99 price point now; margin expands as API costs drop.
Threat	LinkedIn/Naukri clone risk	Speed and depth: ship India-specific features (CGPA, campus rounds) they'll ignore.
Threat	Low India willingness to pay	Anchor on B2B college licensing; let B2C be the lead-gen funnel.

10

Investor One-Liner & 30-Second Pitch

Investor One-Liner

"We are building the AI career advisor for India's 1.5 million annual engineering graduates — an end-to-end platform that tells students exactly why they're being rejected, what to fix, and what to learn next, for less than the cost of a textbook."

30-Second Founder Pitch

The Problem: Every year, over a million skilled Indian CS graduates get rejected without knowing why. They have projects on GitHub but can't get interviews. Poor resumes, zero ATS knowledge, and no career mentor.

The Solution: We built an AI that reads your resume, compares it to the job you want, scores it in 60 seconds, and tells you the exact 3 things to fix — then builds you a personalised roadmap to get hired.

The Traction: We're in the 30-day validation sprint. Early users describe it as 'the first thing that actually told me what was wrong.'

The Ask: We're raising Rs.30–50L pre-seed to validate B2B college distribution and hit 1,000 paying users. With that, we prove the Rs.2Cr ARR path in 18 months.

11

Investment Scorecard

Business Viability 72/100 Real problem, credible model. B2B path de-risks B2C churn.	Revenue Potential 68/100 Rs.2Cr ARR feasible in Y2, but 5% conversion is optimistic for India.	GTM Strength 65/100 Organic-first is capital efficient but slow. B2B colleges = unlock.
Competitive Moat 62/100 Data flywheel potential is strong; moat is thin today, builds over time.	Investor Readiness 55/100 Zero validation = too early for most VCs. Angels/pre-seed after sprint.	

Dimension	Score	Key Reasoning	What Would Raise It
Business Viability	72/100	Real problem + capable founder + capital-efficient model	5 paying users + 1 B2B LOI
Revenue Potential	68/100	Market is large; pricing is right; 5% conversion unproven	Demonstrate 3%+ actual conversion
GTM Strength	65/100	Organic is low-CAC but channels unproven at scale	200+ waitlist from organic in 7 days
Competitive Moat	62/100	India-native + end-to-end is differentiated; not defensible yet	10K resume dataset + 1 college exclusive
Investor Readiness	55/100	Story is compelling; zero evidence; too early for institutional seed	30-day sprint data + first revenue

Visual Strategy Dashboard

A single-view summary of the business model, GTM flow, first 100 users plan, competitive moat, risks, and scores.

Founder Action Sheet — Top 10 Priorities

When	Theme	Specific Action
TODAY	Revenue-first mindset	Decide: the ONLY metric that matters this month is 'did someone pay me?' — not signups, not users.
Day 1-2	Problem interviews	DM 25 CS freshers on LinkedIn. Script: 'I'm building a career tool — can I get 10 mins of your time?'
Day 3-4	TPO outreach	Email 10 college placement officers. Offer: 'Free platform for your 2025 batch — I only ask for feedback.'
Day 5	Landing page live	Build waitlist page (Carrd/Framer). One headline, one email field, one lead magnet: 'Free Resume Score'.
Day 6-7	Community seeding	Post in 15 college WhatsApp groups + LinkedIn. Measure: opens, clicks, signups per channel.
Day 8-14	Concierge MVP	Deliver 20 manual AI resume audits using Claude/GPT. Time each one. Collect structured feedback.
Day 10	B2B qualification	From TPO replies: identify 2 colleges willing to pilot. Even a 'yes to a meeting' is a signal.
Day 15	Build PoC	Resume upload → AI score → top 3 fixes. Nothing else. Ship in 5 days, not 5 weeks.
Day 20	Pricing test	Ask 10 users to pay Rs.99. Track every 'yes', 'no', and reason. This is your most important data point.
Day 30	Decision gate	If: 5+ payments, 200+ waitlist, NPS > 7 → raise pre-seed. If not → pivot to B2B-only or single feature.

14

Sustainability Verdict

VERDICT: ■ VALIDATE — Strong Signal, Zero Evidence

The AI Career Assistant addresses a genuine, large, and emotionally urgent problem in a massively underserved market. The founder-market fit is strong, the business model is capital-efficient, and the B2B college channel provides a credible path to sustainable revenue beyond the volatile B2C freemium dynamic. This is a fundable concept with the makings of a Rs.50–100Cr ARR business in five years — but only if the core assumption that students will pay consistently is validated before scaling.

The 30-day validation sprint is non-negotiable: five paying users and two B2B letters of intent transform this from a strong hypothesis into an investable early-stage company. Without that evidence, it remains a well-reasoned idea in a competitive space. Build distribution before you build features, and prove revenue before you prove scale.
